

CMREC Mobile Website

Task 3 — Interactive Prototype

User Testing & Feedback Report

Project: CMREC College Website Redesign
Platform: Mobile UI Prototype in Figma
Prototype scope: Home, Programs, Admissions and floating navigation menu

1. Prototype Objective

The objective of the prototype is to simulate a simple mobile browsing experience for the CMREC college website. The static mobile screens were converted into an interactive flow so users can navigate between important sections and access the main navigation through a floating hamburger menu.

2. Evaluation Method

A quick usability review was performed using realistic navigation tasks. The evaluation focused on navigation clarity, discoverability of key actions, and the behavior of the floating menu. The prototype was reviewed in Present mode to verify the interaction flow.

3. Usability Tasks

Task	User goal	Expected interaction
01	Find the Programs section	Home → Explore Programs
02	Find the CSE program	Programs → CSE
03	Find Admissions	Menu → Admissions
04	Open and close navigation	☰ → Menu → ✕

4. Usability Observations

Area	Observation	Status
Primary navigation	Home → Programs → Admissions is straightforward and easy to follow.	Good
Hamburger menu	The floating menu provides access to the main sections without leaving the current screen.	Good
Overlay behavior	The menu opens as an overlay and can be dismissed using the close icon.	Good
CTA clarity	Main navigation actions are visually prominent and separated from supporting content.	Good

Area	Observation	Status
Additional items	Placements, Contact Us and Apply Now are secondary items and can be expanded in future screens.	Review later

5. Key Usability Issues & Improvements

Issue	Improvement
The hamburger icon may not immediately communicate navigation to every user.	Keep the hamburger icon consistently positioned in the top-right on all three screens.
The menu needs to feel distinct from the current page.	Use a white floating panel, rounded corners and a subtle shadow.
Adding many destinations could make the prototype unnecessarily large.	Keep the working prototype focused on Home, Programs and Admissions.

6. Prototype Refinements

Refinement	Purpose
Home → Programs navigation	Allows users to move from the landing screen to Programs.
Programs → Admissions navigation	Creates a clear continuation of the main information flow.
Floating hamburger menu	Provides secondary navigation without creating unnecessary screens.
Close overlay interaction	Allows users to return to the current screen after opening the menu.

7. Final Outcome

The final mobile prototype demonstrates functional navigation rather than static screens. Users can move between Home, Programs and Admissions, open a floating navigation menu, select key sections, and close the menu without leaving the current page.

Prototype status: Interactive navigation and overlay interactions completed.

8. Interactive Prototype Link

Open the interactive Figma prototype using the link below:
